#### **MATHEMATICS**

Where possible, each student who participated in SES was matched with a similar student who did not participate in SES. SES students were matched with other students from their school on a number of characteristics, including grade in school, race, free/reduced lunch eligibility, special education status, limited English proficiency, and 2005 ISTEP+ scale score. The chart below provides the results of the match comparison that demonstrates how the ISTEP+ scores and scale score growth of students who participated in SES compare to similar students who did not participate in SES. For Specialty Tutoring, 10 matches out of 13 eligible students (77%) were found for Mathematics. For the group who participated in SES, 50% showed growth on ISTEP+, compared to 70% for the non-SES group. 30% of the students who participated in SES showed one year's growth on ISTEP+, compared to 50% of the students who did not participate. The SES group's average ISTEP+ score declined by 1 point, while the non-participating matched group's average ISTEP+ score grew by 13 points.
